The Unseen Struggles of India's Gig Workers

Imagine Ravi,adedicated Swiggy delivery partner in Mumbai. His day begins at6AM, workingtirelesslyfor 10 hours,26 days a month to support his familyof four. Heearns approximately 21,000 monthly after expenses,a modest sumfor his strenuous efforts.

But Ravi operates without a safety net: no sick leave, no paid time off, and absolutely no insurance. A single day of heavy rain, a common occurrence during Mumbai's monsoon, can cost him ¹700 in lost income. For a family reliant on every rupee, this is devastating.
There are 11.2 million Ravis across India 3¹hardworking individuals in the gig economy who face constant financial precarity. They are denied access to traditional loans due to the absence of salary slips and have never even heard of insurance.
GigZo is here to change that. Because every delivery partner deserves a safety net.

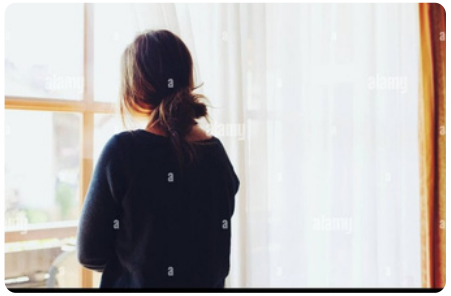
GigZo

When Disaster Strikes: Gig Workers Are Left Behind

Flash Flood · Ravi, Mumbai

Roads underwaterat 9 AM. Hishub goes offline. He sits at home watching ¹700 of daily income disappear.

¹ **700 lost in a single morning**



Section 144 Curfew · Priya, Lucknow

Acurfew is imposedat 2 PMwith no warning. Priya is locked inside for 6 hours. Her family eats less that night.

6 hours of work 4 gone

Severe AQI Alert · Suresh, Delhi

AQI crosses 400 inNovember.The government bans two-wheelers. Suresh has no choice but to stay home.

Full day income lost

Zomato Server Outage · Deepak, Bengaluru

PeakFridaynight.Zomato goesdown for 3.5 hours. Deepak sits outside a restaurant with nothing to deliver.

Peak-hour earnings = ¹0

No paid leave. No sick days. No employer support. No insurance that covers this.

Beyond the Immediate: GigZo's Holistic Protection

Everycompetingsolutionoffersaone-timepayoutwhenatriggereventoccurs,thendisappears.ButRavi'sfinancialpainextendsfar beyond that. Their architecture is reactive, binary, and

incomplete
.

Competitor:Reactive & Incomplete

DAYS BEFORE

NobodytellsRavitheflood is coming. No elevated coverage. He finds out when his wheels are underwater.

DURING

One flat payout, regardless of severity. Whether rain hits 51mm or 90mm, the platform offers the same amount. The true extent of his loss doesn't matter.

DAYS AFTER

Flood clears, coverage ends. But orders won't normalize for days. Two days of 'shadow loss' with zero compensation.

GigZo is the only platform that stays with the worker before, during, and after.

GigZo:Proactive, Dynamic & End-to-End

DAYS BEFORE

GigZopredictsdisruptions 3-7 days ahead. Ravi's coverage auto-elevates, and he receives a notification: "You're protected."

DURING

GigZo's advanced LSTM engine tracks severity hour by hour. Payouts escalate as the disruption worsens, ensuring he receives more when he loses more.

DAYS AFTER

GigZo predicts the recovery curve. Bridge credit is automatically issued to cover the gap and is repaid from next week's premium. Ravi does nothing.

Onboarding in Seconds: Empowering Gig Workers Instantly

The Old Way 4 10315 minutes

1. Downloadapp
2.Enter name, phone, address manually
3.Upload Aadhaar photo 4 wait for OCR
4. Self-declare occupation (unverified)
5. Enter bank account details
6.Wait 24348 hrs for KYC approval
7. Choose plan
8. Set up UPI separately

Drop-off rate at every single step.

GigZo + e-Shram 4 45 seconds

Raviisalreadyregisteredon e-Shram.HisAadhaarisverified. His bank account is NPCI-linked.Hisoccupation isconfirmed.

He enters one number:

e-Shram UAN

GigZo fetches automatically:

- 7 Aadhaar-verifiedidentity 4 KYCdone instantly
- 7 Occupation confirmed as delivery partner
- 7 Primary work district ³ sets trigger zone
- 7 NPCI bank account ³ payout destination ready

One tap. He's covered.

Multi-Layered Fraud Defense: Protecting Honest Workers

Iffraudringsdrainthepool,honest workerswait longer.The circuitbreakerprotectsthemfirst.WhyasingleGPScheckdoesn'twork:Mocklocationapps are free on Android. Any fraud ring can fake a pin. GigZo assumes no single signal can be trusted in isolation.

L1: Movement Verification

Is the phone actually moving like a real person?

MODEL:XGBoost+Cell Tower Fusion. We check road-constrained paths, realistic speed curves, and cell tower handoffs. A spoofed phone sitting on a desk looks very different from a delivery partner stuck at home in a flood.

L2: Coordinated Fraud Detection

Is this a coordinated ring of fake claims?

MODEL: Graph Neural Network. 500partnersclaiming within 15 minutes from the same devices is not a rainstorm 4 it's a fraud ring. Our graph detects this pattern even when every individual claim looks legitimate.

L3: Worker Trust Score

Has this worker earned our trust?

MODEL:LongitudinalBehavioralProfile.Ravi with 8 months of delivery history gets paid in minutes. A new account created 3 days ago claiming during its first disruption event gets human review. Simple.

L4: Zone-Level Circuit Breaker

Is the whole zone being attacked?

MODEL:Zone-Level CircuitBreaker. Ifazone's claim rate spikes 3x above normal in 2 hours, payouts pause. Workers with Trust Score >80 still get 50% advance immediately. Honest workers are protected first.

Defeating GigZo's fraud defense requires simultaneously defeating all four layers. That's not operationally feasible.

Flexible Protection: Pricing That Understands Gig Life

No annual commitments. No confusing monthly math. Every Monday, coverage renews, and premium auto-debits.

1 **29** /week Maxpayout: ¹500/week **Basic Shield:** Occasional workers (< 20 hrs/week)	1 **64** /week Max payout: ¹1,400/week **Standard Shield:** Regular workers (20340 hrs/week)	1 **109** /week Max payout: ¹2,800/week **Pro Shield:** Full-time partners (40+ hrs/week)

Why does the same tier cost different amounts for different workers?

Our ML engine recalculates every Monday based on the forecast for Ravi's specific pin code that week. A Standard Shield worker in Koregaon Park, Pune (low flood risk) pays ¹57. The same worker in Najafgarh, Delhi (high flood + AQI risk) pays ¹79. Workers who go 4+ weeks without a claim get a compounding 12% loyalty discount. Workers in a peer group where nobody claimed that week get 8% of their pooled premium returned.

GigZo's Cutting-Edge Architecture

Ourrobustplatformisengineeredwiththelatesttechnologiestoensureseamless,secure,and intelligent protection for gig workers.

Worker App

React Native + PWA

Mobile-first. Embeddable in Zomato/Swiggy as a micro-frontend.

Admin Dashboard

Next.js + Guidewire Jutro

Real-time zone heatmap, fraud queue, loss ratio analytics.

Backend API

Node.js + NestJS

RESTful microservices. PostgreSQL for policy data. Redis + BullMQ for trigger jobs.

ML Services

Python + FastAPI

XGBoost (Pre-engine) · LSTM (Present-engine) · Cox PH (Post-engine) · CNN-BiLSTM + GAN (Fraud)

Guidewire native: PolicyCenter + ClaimCenter + Integration Gateway + Jutro Digital Platform

Blockchain

Hyperledger Fabric 2.x

Go chaincode. RAFT consensus. Permissioned 4 IRDAI compliant. No crypto tokens.

Policy Admin

Guidewire PolicyCenter + APD

Weekly product lifecycle. Auto-generated REST APIs. No hard-coding.

Claims Admin

Guidewire ClaimCenter

Zero-touch straight-through processing. Payout in seconds not days.

Data Oracles

IMD · CPCB/WAQI · GDELT · Google Maps · e-Shram

Dual-source weather. NLP social events. Government-grade identity.
